About me

Passionate and results-driven **Senior Data Scientist** specialising in AI, agentic LLM systems, and applied machine learning. Experienced in leading cross-functional teams, managing stakeholders, and delivering enterprise AI products from research and proof of concept through production. Strong background in statistical modelling and scientific research (PhD, CERN) with expert knowledge in machine learning and AI (Lecturing at UoE), focused on developing scalable, explainable, and governance-compliant AI solutions that deliver measurable business value.

WORK EXPERIENCE

From Jun. 2024

Senior Data Scientist

Lloyds Banking Group, Edinburgh

Lead cross-functional teams delivering enterprise AI products, advanced machine learning solutions, and agentic LLM systems for high-impact business use cases.

- Led a team of data scientists and ML engineers to develop an **agentic LLM-based claims handler** for orchestrating general insurance claims automation.
- Drove stakeholder engagement by presenting product demonstrations and leading project planning, scope definition, and delivery timelines.
- Built an **agentic claims automation** proof of concept using Google ADK, supporting productionisation of a solution scheduled for enterprise delivery.
- Implemented AI **guardrails** to mitigate hallucinations and protect personally identifiable information (PII), ensuring compliance with governance requirements.
- Designed and deployed automated **MLOps pipelines** for actuarial risk models using Vertex AI, enabling reproducible and explainable ML.
- Translated evolving stakeholder requirements into scalable ML solutions while co-ordinating scrum delivery, code reviews, and engineering standards.
- Received peer recognition through awards including *Innovator of the Year* (2024) and *TechWizz* (2025) for technical leadership and innovation.

2023–May 2024

Quantitative Researcher

PLAYMETECH, London

- Led RD of advanced neural network architectures and simulation methods for sports trading and intrinsic risk modelling.
- Developed and deployed production ML models, benchmarking frameworks, and data pipelines across SQL/NoSQL systems for real-time predictive analytics.

2019–May 2023

Postdoctoral Research Associate The University of Edinburgh

Led the development and deployment of particle tracking and identification AI algorithms for the ATLAS collaboration.

- Built particle-ID algorithms, including **neural-network-based** methods, and developed widely used C++/Python analysis tools.
- Took a **leadership role** in analysis efforts, contributing to publications, technical reports, and collaborative research coordination.
- Lectured** MSc machine learning, covering practical data preparation, modelling, and neural network architectures.

EDUCATION

2015–2019

PhD in High Energy Physics
ATLAS Experiment, CERN

The University of Sheffield

Thesis: Probing the Beyond Standard Model Higgs Sector using ATLAS

2013–2015

MSc in Physics

Uni of Witwatersrand (ZAR)
